

# TAPCUG Linux SIG

**A Division of Tacoma Area PC Users Group (TAPCUG), Washington State, USA**

Linux is quickly becoming the preferred computer operating system!  
Say good bye to proprietary OS's, viruses, worms, trojans, crashes, forced upgrades,  
infuriating pop-ups, repair bills & buy a better, complete Linux operating system  
with all the applications you need for a very affordable price.

Now is the time to make the move to Linux. We welcome you to join us.

**See <http://Linux-Now.us>**

We are Linux distribution neutral and try out all sorts of Linux distributions.  
Our focus is to get all closed proprietary OS users switched to open source Linux.

Since **Linux Mint KDE, Bodhi & Kubuntu Linux** are the most user friendly for general users,  
among the most popular Linux distributions for home or business use  
& is very reasonable in price, we recommend it as your computer operating system.  
Which distribution is best for you depends on your computer and your needs. Just boot or  
reboot the live/install Linux CD/DVD in your computer.

Feel free to contact us regarding the best way to make your move up to Linux.
